SUPERSIZE

Positive-sum real-money games

Lower rake. Higher rewards. Verifiable fairness.

MARKET SIZE

Real-money gaming is the future of mobile gaming

It's the fastest growing mobile gaming genre by revenue.

The wedge is familiar games with lower rake, verifiable fairness, and higher player rewards.

Real-money gamers churn when the economics feel rigged

Incumbents monetize through high rake, withdrawal friction, and opaque matching. That creates a trust gap precisely where repeat play matters most.

“Papaya used bots to **post preselected scores** attributed to nonexistent players”

“We shed light on AviaGames’ use of **unfair bots** for financial gain”

sources: skillz.com/news/skillz-wins-43-million-patent-verdict-against-aviagames, kslaw.com/news-and-insights/king-spalding-secures-largest-lanham-act-award-for-skillz-in-false-advertising-dispute-with-papaya-being-found-liable-by-jury

The edge is not another game.
It is better game economics.

Incumbents can copy any game. They can't copy a business model that shares more with players through lower operating costs.

Dimension	Supersize	Skill-game apps (Skillz, Papaya, Avia, etc)	Online casinos (Stake, bet365, Shuffle, etc)
Rake / house edge	**10% rake**	Typically 15-30% rake	Typically 1-5% house edge
Player economics	**50% rakeback plus 30% fee-funded prize pool**	Purely extractive	Typically 3-15% rakeback
Fairness proof	**Auditable shared seed matches**	Opaque operator logic	Trust the house
Cost to scale	**Protocol scales automatically**	Operational overhead and custody burden	Heavy compliance and custody burden
How to win	**Pure skill**	Pure skill	Pure luck

Supersize turns real-money games into a player-aligned protocol

The product keeps games familiar, but changes the economics underneath: transparent matches, lower rake, instant settlement, and rewards funded by protocol fees.

1 Play

Players enter skill-based matches in games they already understand.

2 Prove

Shared-seed randomness and onchain settlement make outcomes fair and auditable.

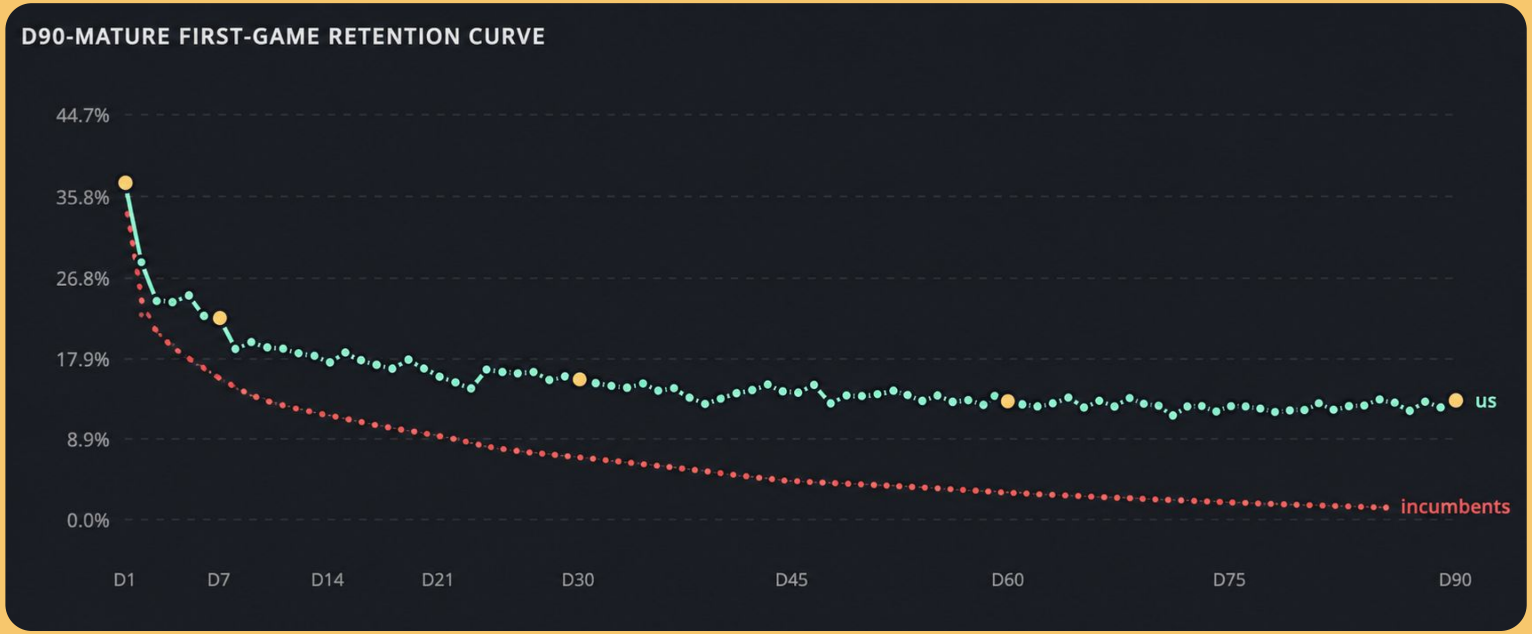
3 Reward

Fees route back into player rewards instead of only extracting from play.

RETENTION

Lower rake and visible rewards give players more reason to return

The thesis is simple: share more value, keep games provably fair, and build strong player loyalty.



10% protocol fee

Lower take rate than major incumbents.

50% rakeback

Half of the collected fees are returned to active players.

Weekly prize pool

30% of the collected fees are paid out to players weekly.

Instant loop

Play, settle, claim, and re-enter quickly.

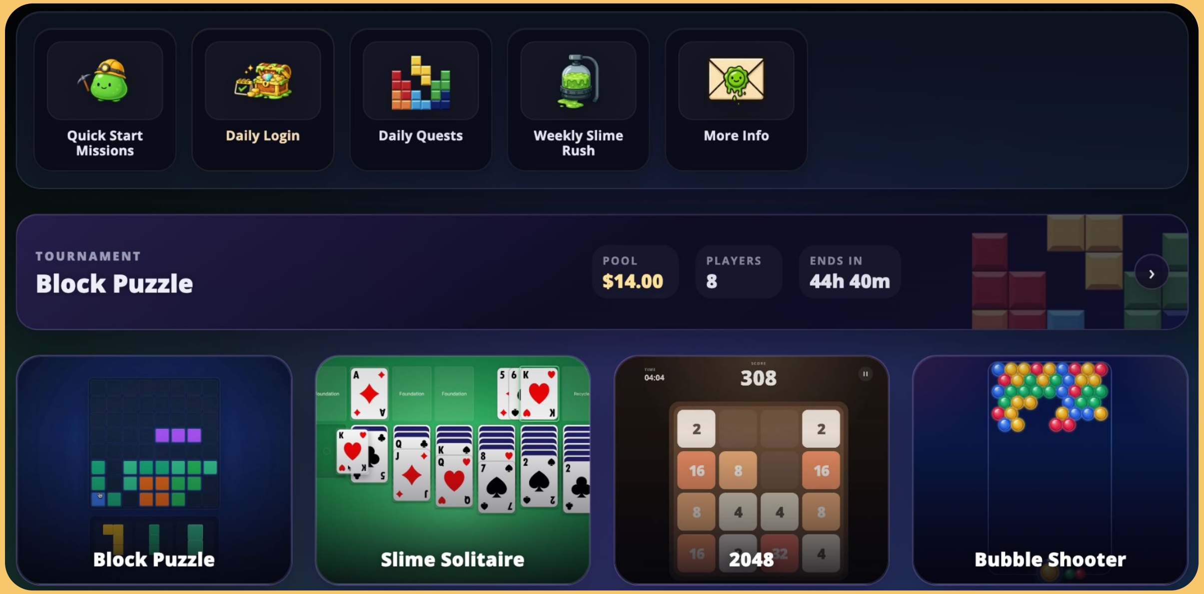
What this proves

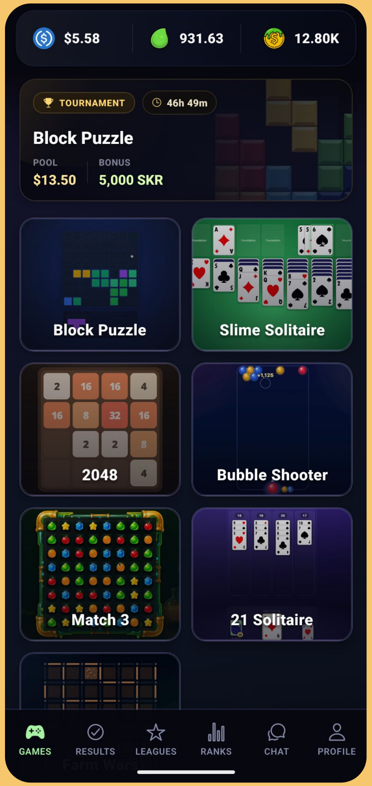
Supersize has live gameplay loops, real cash volume, and positive contribution per revenue user.

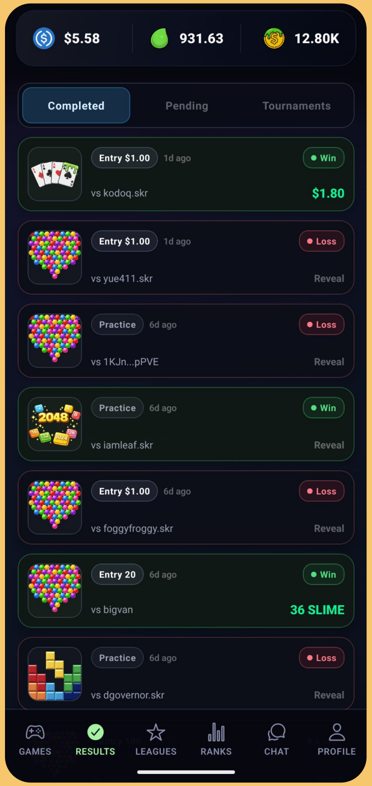
PRODUCT

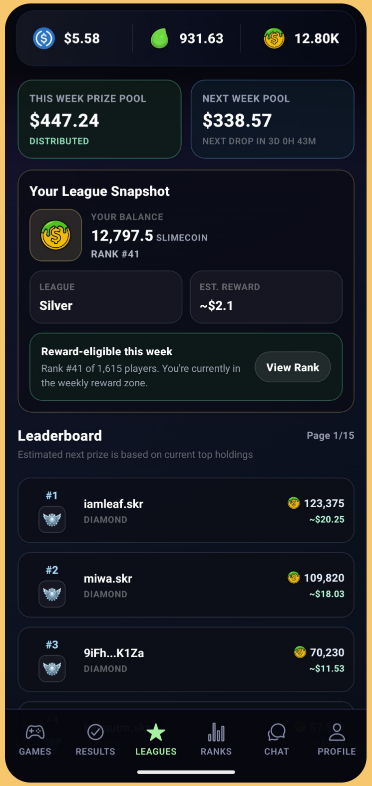
One app, many games, the same fair settlement

Supersize starts with familiar casual games so the user education burden stays low. The protocol layer changes the money flow, not the fun.









www.supersize.gg lewis@supersize.gg

Supersize can charge less because the protocol does more of the work

A 10% match fee can fund the ecosystem because escrow, matching, settlement, and rewards are built into the protocol instead of a heavy operating layer.

REWARD LOOP

Rewards make the system positive-sum for players

Slime and Slimecoin are the retention mechanics that make value visibly flow back into the player economy.

Slime is our rakeback currency. Slimecoin is our loyalty token.

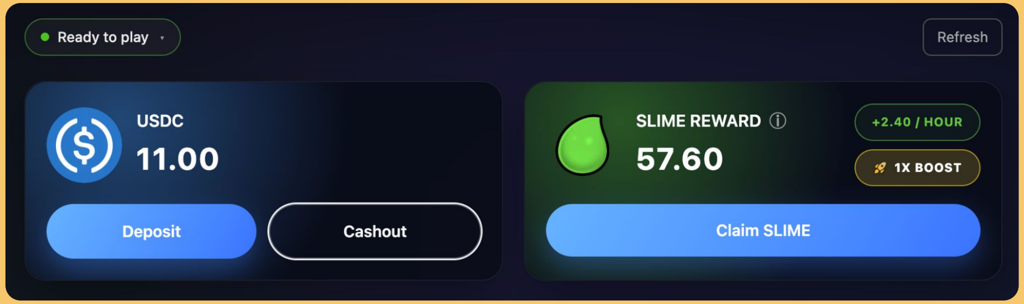
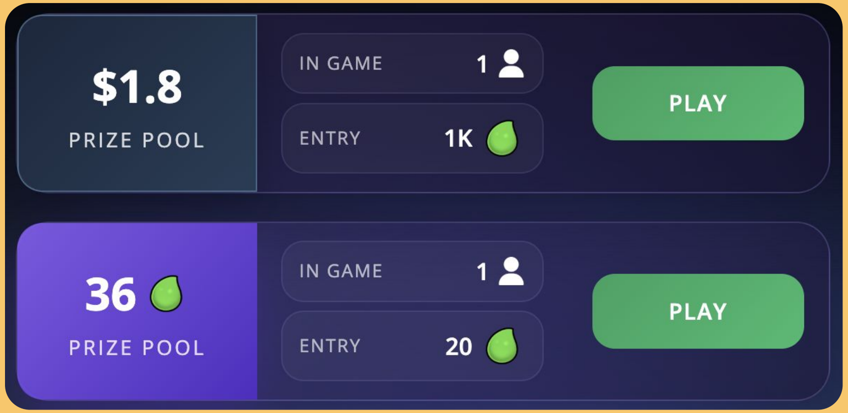
More play
drives more fee volume

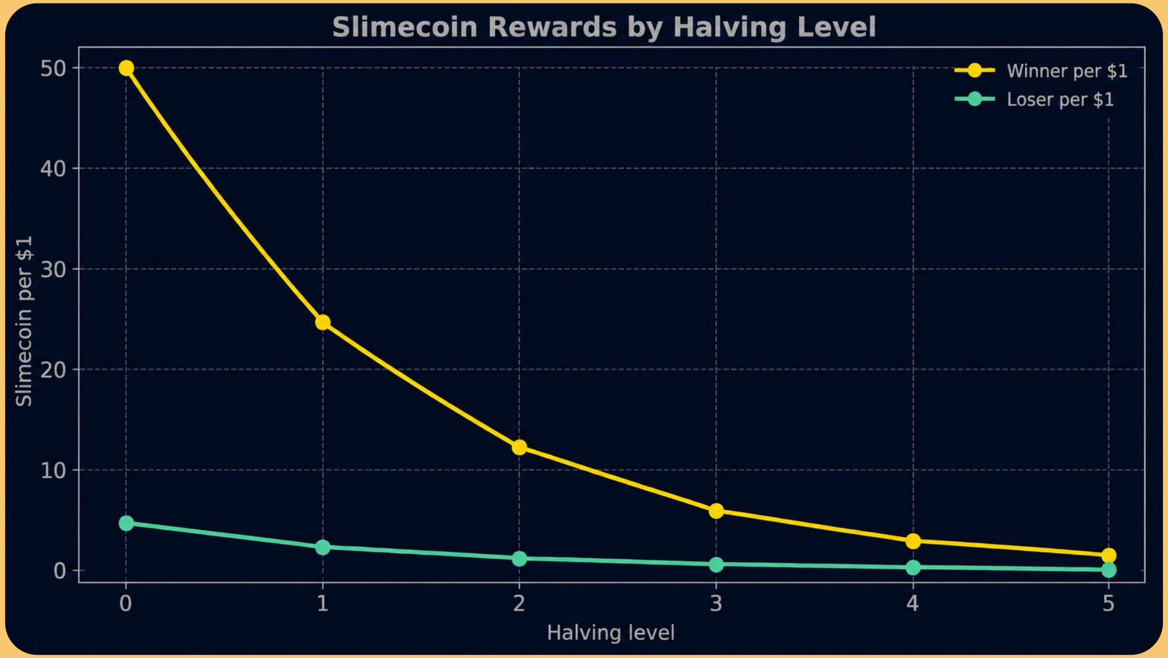




REWARD LOOP

A play-to-mine token with supply-linked halvings

Slimecoin powers a permanent leaderboard and helps bootstrap USDC volume.



Weekly prize pool

Each week, 30% of protocol fees fund a prize pool for leaderboard participants.

The protocol is the cost advantage

Supersize replaces back-office burden with onchain primitives. Our non-custodial and zero-server architecture eliminates legacy overhead of traditional real money gaming.

Architecture

The protocol runs on MagicBlock and settles on Solana

Self-custody vault

Escrowed buy-ins settle without asking players to trust an operator balance sheet.

Async onchain matchmaking

Players can be matched on skill-game results without needing synchronous sessions.

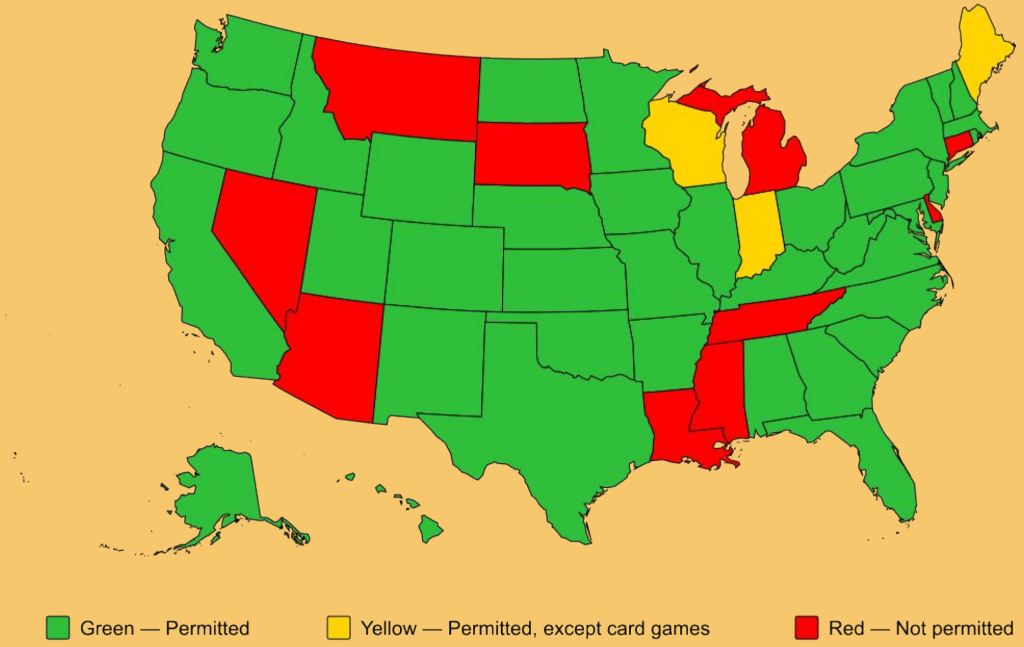
Fully onchain game library

Games live onchain and plug into the same contest, fee, and settlement rails.

COMPLIANCE

Fairness and jurisdiction controls are product features

Real-money skill contests are jurisdiction-specific. Supersize must be built for diligence by being precise: state-by-state availability, skill-based game design, and verifiable match conditions.



Skill-game boundaries

Contest format and availability should match jurisdiction rules.

Shared-seed fairness

Matched players compete under identical game conditions.

Transparent settlement

Outcomes and payouts are auditable instead of operator asserted.

Small team, high technical leverage

Our team has a proven ability to ship games, protocol rails, and Solana-native infrastructure.
